

INDEPENDENT CANDIDATE
OPERATING ARTIFACT

Mission Window Review

A two-page portfolio conversation for deciding what to accelerate, integrate, prove, productize, hold, or stop.

Use: one major roadmap or portfolio bet per review. Owner: product leader. Participants: product, UX, engineering, growth/sales, program/support, mission SME, and contracts/acquisition as relevant.

Decision record

FIELD	QUESTION	EVIDENCE TO BRING	DECISION OWNER
Mission outcome	What operator decision or mission result changes?	Workflow evidence, consequence, current alternative	Product + mission
Human authority	What may AI recommend or execute, and what remains human?	Doctrine, policy, audit, fallback, escalation	Mission + assurance
Integration fit	What legacy, data, security, access, or deployment constraints matter?	Architecture, environment, interoperability, data locality	Engineering
Evidence threshold	What proof earns accelerate or scale?	Evaluation, reliability, adoption, support, mission outcome	Product
Acquisition path	How can the customer buy, fund, deploy, and sustain it?	Vehicle, budget owner, deployment and service burden	Growth/contracts
Learning return	Which field signal must change the roadmap?	Support recurrence, user behavior, results, rework	Product + support

Disposition

Accelerate / Scale Mission pull, authority, integration, evidence, and acquisition path are sufficiently aligned. Name capacity, owner, next proof, and review date.	Integrate / Productize Value is credible, but reusable platform, deployment, support, or acquisition capability is the binding work.	Prove / Hold / Stop Name the missing evidence or constraint. Do not carry a flattering roadmap item without a decision rule.
--	--	--

Closing questions

1. What did we learn that changes another product or platform decision?

2. Which recurring support or integration burden should be made reusable?

3. What will we deliberately not do before the next review?

4. Who owns the next evidence, by when, and what decision will it unlock?

This artifact is an illustrative work sample. It is not a representation of Two Six Technologies' internal process.
