Two Six Technologies Product Leadership Team

Re: Product Associate Director (Group Product Manager)

Two Six is hiring at a consequential moment. Helix, Sentr, and SIGMA show a company moving beyond isolated innovation toward a Decision Advantage portfolio that must anticipate mission demand, preserve operator trust, integrate with constrained legacy environments, and convert field learning into repeatable product leverage. That is the operating problem I would be excited to help solve.

My career has repeatedly placed me where technical products, high-consequence operations, and organizational adoption meet. At Compunetics, I led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics while collaborating with DoD and other high-reliability customers. At Vape-Jet, I now connect factory, field, customer, support, and machine-fleet signals across roughly 1,000 fielded robots into prioritized work, earlier risk detection, standard work, training, and accountability.

I also work directly with agentic AI patterns through DudeWorth: structured context, retrieval, human review, escalation, decision records, evaluation, and governance rails. I do not treat AI as a layer of terminology. I attach it to work, authority, evidence, adoption, and measurable operating outcomes - the conditions required for trusted mission use.

For Two Six, I would bring a player-coach posture. I am comfortable maintaining a backlog, shaping a portfolio thesis, coaching PMs and designers in live work, using AI to accelerate product and engineering tradecraft, and filling gaps when the team needs a builder rather than another meeting. My proposed Mission Window Contract makes the mission outcome, human authority, integration burden, evidence threshold, acquisition path, and field-learning return explicit before a roadmap bet consumes scarce capacity.

The independent candidate vision at <https://russelldudek.github.io/TwoSix/> makes that thinking tangible through the Mission Window Synchronizer, a practical portfolio review artifact, and a 120-day entry plan. It is not a claim about undisclosed Two Six processes; it is a work sample grounded in public product information and verified career evidence.

I would welcome the opportunity to discuss where Decision Advantage currently loses time, how portfolio-level decisions should interact with empowered teams, and what a materially stronger product operating model should make possible in the first 120 days.

Carpe diem,
Russell Dudek
